EXPERIENCE

Intern Front-End Developer
Smarteknology

03/2018 – 09/2018   *Jacksonville, FL*

A startup company developing a cloud-based solution for data collection, processing and prediction.

Achievements/Tasks

- Co-develope a dynamic, secure web application from scratch; launching a visually appealing, user-friendly interface with interactive features to optimize page views and user experience.
- Build the front-end for several web applications and perform the integration with back-end solutions.
- Write and review all software documentation and update in version control.
- Technologies used: HTML5, CSS3, JS (JQuery) and Git.

Technical Support Specialits
DESOFT

07/2014 – 02/2018   *Santa Clara, CU*

A computer solutions company with more than 15 years of experience in the IT sector. Offering development, deployment, and support of business software.

Achievements/Tasks

- Confirm program objectives and specifications by testing new programs; comparing programs with established standards; making modifications.
- Achieve computer system objectives by gathering pertinent data; identifying and evaluating options; recommending a course of action.
- Evaluate vendor-supplied software by studying user objectives; testing software compatibility with existing hardware and programs.
- Maximize use of hardware and software by training users; interpreting instructions; answering questions.

EDUCATION

Bachelor of Science in Automation Engineering
UCLV Martha Abreu

09/2009 – 07/2014   *Santa Clara, CU*

SKILLS

HTML5   CSS3   JavaScript (JQuery, ES6)

Testing (Mocha, Chai)   Version Control (Git)

LATEST PROJECTS

Listio ⬈

- A web application that allows the user to create, edit and populate playlists fetching song's metadata from the Spotify API. A simple app that displays the so famous CRUD operations, NodeJS with ExpressJS, and MongoDB were used to build this project. It also has JWT Auth implemented; tested with Mocha and Chai; and deployed with TravisCI on Heroku. JSDoc for documentation is the cherry on top of everything. Feel free to check the code of this one.

MrBooks ⬈

- Here is the ultimate search tool for books, or it will be! It provides the list of the current Best Seller books in the market and also allows to search books across the web with the Google Books Engine and Voice Speech Dictation. This project is a display of the use of several APIs, NY Times and Google Books APIs were the main ones. JQuery did the heavy lifting here, especially in the render and normalization methods used to organize and display the data. This is a good example that shows how to work with different APIs to take what we need, merge, and use it in our app. The Speech-To-Text API is a bonus for coolness, it actually works incredibly well.
